

Release Notes 3.3.1 / 3.3.2
Pay Period 23
November 2, 2007/ November 9, 2007

The following items have been moved (migrated) to Production for use by Agencies beginning on November 2, 2007.

IM126399 - Query HE0286

ISSUE: Query timing out when being run by user

RESOLUTION: Modify sql to use new row level security tables for 8.9

USER IMPACT: User can now run query HE0286 without any performance issues and return results as expected.

The following items have been moved (migrated) to Production for use by Agencies beginning on November 9, 2007.

IM121134 - Update Appointment data

ISSUE: On some employee's PAR actions, their appointment data (*Employment 1* tab, *Appt Data* hyperlink, fields *NOA code*, *Current Appointment Authority #1*, and *Current Appointment Authority #2*) are incorrect. However, users have no direct way of correcting the values in these fields

RESOLUTION: A new menu option has been created (HHS Custom menu >> Process >> Fix Current Appt Auth. Data) to correct this data. Enter the appointment data for the earliest PAR action for the employee, and the program will apply these values to the PAR actions for the employee. When the employee has a PAR action with a 1xx or 5xx NOA code, that action's NOA and legal authority values will then become the values applied to successive PAR actions for the employee.

User Impact: The user can now update the current appointment data

IM127182 – Name on data control not populated

ISSUE: Users are experiencing issues on some hires where the name does not populate on the data control page, even after the action is set to a PRO status. As well, in these cases, the employees are not available on the benefits and/or payroll side for updating their information.

RESOLUTION: We have not been able to determine what is causing the issue, but as a workaround, we have put a step in the PAR Push program that will identify these employees and insert the missing personal data tables.

USER IMPACT: Users will now be able to access the employees in all pages, PAR and Payroll, to update all of their information which will result in the employees getting paid correctly. In addition the name on the data control page will be populated, so when working on the PAR Pages, the name of the employee will appear on the page.

IM126265/IM125122- Auto-WGI assigning wrong WGI status

ISSUE: When an employee is at the max step for their grade, they should be assigned a WGI status of N ("Not Applicable"). However currently the program in EHRP is assigning a status of W ("Waiting") to anyone who receives a WGI. In addition, another scenario existed if the WGI action had an effseq > 11, then the created status would be assigned not only to the prior row but to the current row as well.

RESOLUTION: Modified Auto-WGI program (FGHR002B) to assign status correctly.

USER IMPACT: Employees will now be assigned the correct WGI status thus ensuring that they will receive their next WGI without error.

IM126337 – Restrict the use of SETID ‘DHHS0’

ISSUE: Daily processes failed due to some new deptids that were created with invalid codes.

RESOLUTION: Introduce an edit to ‘error’ when invalid SETID is saved.

USER IMPACT: Users must use valid SETID under Setup HRMS ->Foundation Tables ->Organization ->Department USF

IM125994/IM127748- Queries HE0340 and HE0340A

ISSUE: Users requested the capability to access Retirement Package Data received from DFAS on a biweekly basis.

RESOLUTION: Created query HE0340– Data sorted by SSN with search criteria of: Emplid Like (%for all) or SSN Like (%for all) or Last Name Like (%for all).
Created query HE0340A – Data sorted by SSN with search criteria of: Start Date and End Date. Data will be pulled for any row with a Pay Period End Date within the specified Start and End dates.

USER IMPACT: Users can now report on Retirement Package Data.

IM124068 – Tenure Conversion Notice USF under Collective Processes.

ISSUE: Terminated employees are included on the list.

RESOLUTION: Delete all terminated employees currently showing Tenure Conversion Notices and fix the FGHR004A program to correctly select only active employees.

USER IMPACT: Navigate to Workforce Administration>>Collective Processes>>Tenure Conversion Notice USF. On Find an Existing Value page click on Advanced Search and search for Automatic Action Type of Career Tenure Conversion.

EHRP Query Details

| Name | Purpose | Parameters | Data Provided |
|---------------------------------------|---|----------------------------|---|
| HE0340 - DFAS Retirement Package Info | This report provides Retirement Package information received from DFAS. | SSN or EMPLID or Last Name | SSN EMPLID Last Name First Name Middle Initial OPDIV |
