

The following items have been moved (migrated) to Production for use by Agencies beginning on November 23, 2007.

**IM84829** – Enforce EHRI Edits online

**ISSUE:** There are various error-checks (“edits”) that OPM performs when it receives our EHRI interface data. We want to improve the quality of the data in EHRP so that our data is “clean” when sent to OPM.

**RESOLUTION:** Review the OPM edits and determines which ones apply to EHRP. For those edits, prevent data entry of conditions which violate these edits.

**USER IMPACT:** Users will be forced to abide by the EHRI edits or they will not be able to enter PAR actions. This will help us increase the integrity of our data, especially the data reported to OPM.

**IM125373** – New Locality Percentage for location 530000073

**ISSUE:** OPM changed locality percentage for location 530000073. Users wanted to use this new location but needed the locality percentage to be updated first.

**RESOLUTION:** Insert new effdt row on the GVT\_GEOLOC\_TBL updating the percentage to reflect the Seattle area percentage versus the rest of the us

**USER IMPACT:** Location will now apply the correct locality percentage for the 530000073 location code.

**IM126599** – Modify existing query

**ISSUE:** Add new fields to Query HE0163

**RESOLUTION:** New fields result in new query HE0163A

**USER IMPACT:** New query will result in I.H.S. data clean-up.

**IM127387** – Validation of Veterans Information

**ISSUE:** Veterans information is found in the PAR pages on the Personal Data tab, Veterans Info hyperlink. Most of the fields on this page are only applicable when the employee is a veteran; however, we were not enforcing that.

**RESOLUTION:** Enforce validation so that the fields are enterable only when the conditions warrant.

**USER IMPACT:** Fields Veterans Preference and Military Status are now mandatory.

**IM127498** – Correction to the *Fix Employee Current Appointment Authority* menu option. .

**ISSUE:** This menu option allows users to correct the appointment data values for an employee’s PAR actions. However, there was a flaw in the program – the appointment data was not getting updated if: (1) there were no previous 100-level or 500-level actions; and (2) the NOA & legal authorities of that action matched the Appointment NOA and CAAs of that action.

**RESOLUTION:** Corrected the error so that the appointment data is updated properly for this condition.

**USER IMPACT:** Users can correct Current Appointment authority by themselves without having to generate a peregrine ticket for this to be corrected behind the scenes.

**IM127979** – New FEGLI code (A1); Redefine code (A0).

**ISSUE:** OPM regulation

**RESOLUTION:** Clarifies employee position, not pay status.

**USER IMPACT:** DFAS pay criteria

**IM128404** – Validation of base pay vs. grade min/max values

**ISSUE:** In many cases where we are changing the base pay, and then comparing the base pay to a minimum or maximum value for the grade, the error message prints out with many zeroes at the end (about 30).

**RESOLUTION:** Round min/max value to 2 decimal places to make the error message easier to read.

**USER IMPACT:** Rounding the minimum and maximum values to 2 decimal places makes the message easier to read.

EHRP Query Details

Name	Purpose	Parameters	Data Provided
HE0163A	I.H.S. Data clean-up	Setid	The legal auth. under which employees. are appointed
